Election/Restrictions

1. This application contains claims directed to more than one species of the generic invention. These species are deemed to lack unity of invention because they are not so linked as to form a single general inventive concept under PCT Rule 13.1.

The species are as follows:

SPECIES 1: Figure 3

SPECIES 2: Figures 4A,4B

SPECIES 3: Figure 4C

SPECIES 4: Figures 5A,5B

SPECIES 5: Figures 7A-7D

Applicant is required, in reply to this action, to elect a single species to which the claims shall be restricted if no generic claim is finally held to be allowable. The reply must also identify the claims readable on the elected species, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered non-responsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

2. The claims are deemed to correspond to the species listed above in the following manner:

SPECIES 1: Figure 3, claims 3,4

Art Unit: 2615

SPECIES 2: Figures 4A,4B, claims 5,6,9,10

SPECIES 3: Figure 4C, claims 7-8

SPECIES 4: Figures 5A,5B, claims 11-14

SPECIES 5: Figures 7A-7D, claims 15-20

The following claim(s) are generic: claim 1 is generic.

3. The species listed above do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, the species lack the same or corresponding special technical features for the following reasons:

Species 1 has the technical feature of wherein the EM noise filtering/ESD section comprises a resistor connected serially between output port of the amplification means.

Species 2 has the technical feature of EM noise filtering/ESD section comprises a first resistor connected serially between an output port of the first capacitor and an output port of the second capacitor to perform a decoupling function, so that the EM-noise filtering/ESD blocking section has a shape of a character 'II'.

Species 3 has the technical feature of EM noise filtering/ESD section comprises a first resistor connected serially between a ground port of the first capacitor and a ground port of the second capacitor to perform a decoupling function, so that the EM-noise filtering/ESD blocking section has a shape of a character 'inverted II'.

Species 4 has the technical feature of EM noise filtering/ESD section comprises a first and a second resistor connected respectively between adjacent ends of the two capacitors so that the EM noise filtering/ESD blocking section has a shape of a character '#'.

Art Unit: 2615

Species 5 has the technical feature wherein the EM noise filtering section comprises a first capacitor, a second capacitor, and a third capacitor connected in parallel with each other between ground port and output port of the amplification means.

Applicant is required, in reply to this action, to elect a single species to which the claims shall be restricted if no generic claim is finally held to be allowable. The reply must also identify the claims readable on the elected species, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered non-responsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).
